## **Recommendations:**

- Implementation of controls such as policy of Least Privilege to employees, separation of duties, encryption, password manager & policies, backups, IDS, etc.
- While notes say legacy systems are monitored and maintained, they are not being properly maintained if there is no regular scheduling of maintenance.
- All PCI DSS policies need to be implemented
- Proper classification of assets, inventory, and user access policies needs to be implemented
- Further controls may need to be touched on and implemented to improve security posture
